

R·B

MARbled WALLPAPER

➤ DIMENSIONS

Repeat (horizontal): 33cm
Repeat (vertical): 68.15cm
Width: 130cm
Match: Straight
Minimum order: 11 linear metres

➤ MATERIALS

Cellulose, Polyester, Binder,
Mineral pigments

➤ PRINTING

Our digital printing department uses pigment based printing systems ideally suited for textiles and wallpaper. The benefits of using pigments are that they have excellent light and rub fastness, together with a soft handle making it well suited for furnishing, as well as fashion fabrics.

➤ BENEFITS OF LATEX PIGMENT

Prints produced with inks that contain pigments, such as HP Latex Inks, tend to last longer than prints produced with inks that contain dyes, but nonetheless they will start to fade over time depending on the intensity of UV light exposure.

The addition of an anti-scratch agent to the third-generation HP Latex Inks provides a high level of scratch resistance on smooth, uncoated media—scratch resistance of HP 831 Latex Inks and HP 881 Latex Inks is higher than competitor eco- solvent inks and comparable to hard solvent inks on self-adhesive vinyl and PVC banner. This high level of scratch resistance significantly reduces the risk of accidental damage during the finishing, installation, and display of unlaminated graphics compared to previous HP Latex Inks and competitor eco-solvent inks.
